

Safety Authorization on ISU Farms

April 8, 2020

On ISU farms, the on-site manager or superintendent has the responsibility and authority to communicate, distribute, and enforce the safety protocols related to all safety/biosecurity topics including those related to the COVID situation <https://www.farms.ag.iastate.edu/covid-19-protocols-isu-research-farms>. The protocols apply to all university employees, students, contractors or stakeholder/partners, and visitors. Anyone who does not comply should receive a warning to ensure full understanding and compliance. If a non-compliance continues or is repeated, that person should be asked to leave the premises. For university employees or students, any non-compliance will be recorded and reported to the individual's supervisor.

Further, the on-site manager or superintendent has the responsibility to post safety notices in appropriate places including entrance doors and gates and circulate the safety protocols so that all are aware. Locking exterior doors and gates accompanied by a notice to explain entrance procedures is required to control traffic and ensure communication of safety protocols.
